ClimateMaster Releases the Vertical Option of the Tranquility Compact (TC) Belt Drive Series

Oklahoma City, OK, October 25, 2011-ClimateMaster is now offering the Tranquility Compact Series with a vertical cabinet. Available in sizes 6 tons through 10 tons with belt-drive blowers, multiple cabinet configurations and efficiencies to meet new ASHRAE building standards, the Tranquility Compact (TC) Series offers a wide range of units for most any installation.

The Tranquility Compact Series has an extended range refrigerant circuit, capable of ground loop applications, ground water applications, as well as water loop (boiler-tower) applications. Standard features are microprocessor controls, galvanized steel cabinet, epoxy powder coat painted front access panels, galvanized steel with epoxy powder coat painted drain pan and TXV refrigerant metering devices.

Vertical unit configurations can be ordered with front or back return air and top, front, or back supply air discharge. The air discharge is field convertible using all existing parts including panels and belts. The electrical box can also be field converted to either side of the unit. The small footprint allows the unit to be installed in tight spaces which can be the difference in major construction or a simple unit change out.

ClimateMaster, Inc. manufactures water-source and geothermal heat pumps, which are considered to be the most energy efficient and environmentally friendly type of air conditioning and heating products available on the market today. Headquartered in Oklahoma City, Ok, ClimateMaster, Inc. is a wholly owned subsidiary of LSB Industries, Inc. whose common stock is traded over the New York Stock Exchange under the symbol LXU.
