Installation Instructions

Cooling Chassis

ELEC. HEAT

700 SERIES — MODELS 7 THRU 17 COOLING CHASSIS INSTALLATION

Step 1. Set lower rear edge of cooling chassis inside wall box opening and push entire chassis forward, making certain that chassis slides in straight until it is all the way into the wall box (below).

Step 2. Press chassis firmly against wall box mounting flange. Then place U-clamp over threaded studs and tighten wing nuts on studs (right). U-clamps and wing nuts are packed in hardware bag in cooling chassis carton.

NOTE: When tightening wing nut on U-clamp, chassis must be pushed firmly into wall box.
